PROFILE

Junior Full Stack Developer with experience in Vue 3, Nuxt 3, Node.js, and Firebase, comfortable working across both frontend and backend. I integrate REST APIs, real-time databases, and cloud deployments to build functional, end-to-end solutions. Methodical in diagnosing and solving problems before writing code, with strong adaptability and a fast learning curve for new technologies.

EXPERIENCE

JUL 2025 — JUN 2026

Full Stack Developer

Clase Alpha SAS — Medellín (Hybrid)

- Developed the fixed-assets inventory module to manage the company's internal assets (assets that don't leave company premises).
- Built the sales inventory module (POS system): business management, user roles (admin/cashier), real-time product and inventory tracking, shift open/close with discrepancy verification, and table management for dine-in businesses.
- Designed and developed the mixed-assembly module for an electronic voting platform (Sistevot), enabling simultaneous in-person and virtual meetings.
- Implemented real-time synchronization using Server-Sent Events (SSE), REST endpoints with Joi validation, and QR-based credential flows.
- Worked with Vue 3, Nuxt 3, Pinia, Node.js, and Firebase Firestore, deploying services on Google Cloud Platform.

PREVIOUS EXPERIENCE

Before moving into development, I spent five years in automotive mechanics and logistics — a stage that shaped how I approach problem-solving: diagnose before acting.

Suragas S.A. — Automotive Technician (2018 – 2020) · Apotema S.A.S — Delivery and Order Assistant (2021 – 2022) · Service Motorrad — Mechanics and Logistics Assistant (2022 – 2023)
